

## MIRROR

## Convex Circular Mirror

*Acrylic, Indoor*

- Monitor unguarded aisles
- Prevent costly accidents by eliminating blind intersections
- Safeguard entrances and exits

A circular convex mirror has the shape of a camera lens and provides a 160° viewing range. It can be mounted from either a wall or ceiling. With metal rim and hardboard backing.

*Features*

- Resistance to breakage — Acrylic is over 10 times more resistant to breakage than glass, resulting in fewer accidents.
- Lighter in weight — Acrylic is less than half the weight of glass; making it much easier to install.
- Safety — Acrylic protects bystanders from injury. Even when subjected to high impact blow, acrylic breaks into large, dull edged pieces which disperse at low velocity. Further, acrylic mirrors meet OSHA safety requirements.
- Clarity — Acrylic has a 20% brighter image than glass. Glass mirrors are recommended for locations where scratches are likely to be a problem.
- Other sizes and configurations available on F/O.

Part No.	Diameter
