DOOR PULLS

Round door pulls are available in different diameters and centers, both straight projection and offset. There are also many different methods of fastening available. Specifications necessary include size and center to center dimensions, fastening method (including whether or not they are to be mounted back to back) as well as thickness and material of the door. Please speak to our sales professionals who can fill you in on all the details needed to order. Two of the most commonly requested pulls are:

Door Grip

TRM1194

TRM 1191

Part No.	Description	Dia.	Center to Center
TRM 1194 4 630	E Mounting, Straight Projecting Pull	-----3/4"	-----12"
TRM 1191 4 630	E Mounting, Offset Projecting pull	-----1"	-----12"

E mounting is a through bolt with a finishing washer not intended for glass doors.

Offset Entrance Door Pulls

Bracket "A"
Surface on through-bolt mounting - Type G

Part No.
TRM ML4

SURFACE/FLUSH BOLTS

Surface Bolts

- Spec: L04151
- Base Material: Extruded Brass
- Supplied with wood screws
- Supplied with mortise and rim strikes

These neat, modern solid brass bolts feature:

- Concealed screw installation
- No bands across the face to mar or scratch the bolt surface
- Tension spring action to hold the throw bolt solidly in position
- A perfect acting bolt every time because of its interlocking construction which also adds strength and durability
- The installation is simple and easy — no fussing with tools and waste of time in fitting and adjusting
