

FILE CABINET LOCK

FileSecure locking bars make securing file cabinets simple. A slight upward motion of the inner slide bar releases all locking points allowing the spring loaded bar to gently swing out of the way. The compact design of FileSecure bars give sufficient clearance for unrestricted access to adjacent file drawers when locked or unlocked.

Bars are shipped standard for installation on the left side of a file cabinet. You can easily reverse the inner slide for application on the right side. Sheet metal screws are provided.

Constructed of 16 gauge formed steel, these locking bars have a durable, powder-coat acrylic enamel finish. The inner slide bar interlocks with a locking lug at each drawer opening when in the locked position providing added security

Specifications

- Multi-point locking design
- Spring-open action - easy one motion opening
- No storage issues - swings out of the way and remains attached to the cabinet
- Easy installation - opening of file drawers is unnecessary during installation

Part No.	Length	No. of File Drawers/Description
